

## Method and Apparatus for Unsupervised Training of Natural Language Processing Units

### ABSTRACT OF THE DISCLOSURE

5           A method of training a natural language  
processing unit applies a candidate learning set to  
at least one component of the natural language unit.  
The natural language unit is then used to generate a  
meaning set from a first corpus. A second meaning  
10 set is generated from a second corpus using a second  
natural language unit and the two meaning sets are  
compared to each other to form a score for the  
candidate learning set. This score is used to  
determine whether to modify the natural language unit  
15 based on the candidate learning set.
